**ASSIGNMENT – 2 : GIT COMMANDS**

*Commands used for local Git repository setup and GitHub connection*

### 1. git --version

Function: This command checks whether Git is installed on the computer and displays the version of Git currently installed. It is useful for verifying the Git installation before starting Git operations.

### 2. git init

Function: This command initializes a new Git repository in the current project folder. It creates the hidden .git directory, which allows Git to track changes and maintain the project's version history.

### 3. git status

Function: This command displays the current state of the Git repository. It shows the active branch and indicates which files are untracked, modified, staged, or ready to be committed.

### 4. git add .

Function: This command adds all new and modified files from the current folder to the Git staging area. Staging prepares the selected files to be included in the next commit.

### 5. git commit -m "Initial commit"

Function: This command permanently records the staged changes in the local Git repository. The message "Initial commit" describes this first saved version of the project.

### 6. git branch -M main

Function: This command changes the name of the current branch to main. The main branch is commonly used as the primary branch for a project.

### 7. git remote -v

Function: This command displays the remote repositories connected to the local Git repository. It helps verify the fetch and push URLs used to communicate with GitHub.

### 8. git remote add origin <GitHub-URL>

Function: This command connects the local Git repository to a GitHub repository. The name origin is used as the standard short name for the remote GitHub repository.

### 9. git push -u origin main

Function: This command uploads the local main branch and its committed files to the GitHub repository. The -u option establishes a tracking relationship between the local main branch and origin/main, making future pushes easier.

```
PS C:\Users\lenovo\OneDrive\Desktop\VSEC pratical> git --version
git version 2.45.2.windows.1
PS C:\Users\lenovo\OneDrive\Desktop\VSEC pratical> git init
Initialized empty Git repository in C:/Users/lenovo/OneDrive/Desktop/VSEC pratical/.git/
PS C:\Users\lenovo\OneDrive\Desktop\VSEC pratical> git status
On branch master

No commits yet
